

PRESS RELEASE

Arbi Bathroom Furniture: Innovation, Design, and Environmental Awareness

Arbi Bathroom, synonymous with design expertise and reliability, stands out for its cutting-edge image, always attentive to the well-being of the planet and people. For this reason, the company adopts **targeted strategies that combine quality, design, and environmental responsibility**, investing in concrete solutions to improve productivity and reduce ecological impact.

This philosophy takes shape in the **modern Maron di Brugnera (PN) plant, the beating heart of Arbi's production**, a model of innovation and sustainability characterized by complete production autonomy. The majority of the products in the catalog are manufactured internally, thanks to a highly automated chain and advanced software systems that allow complete monitoring of the entire production cycle, from order to delivery. This approach guarantees operational efficiency and optimized lead times, while respecting the environment.

Arbi's attention to environmental protection and recycling management is confirmed by the **important Ecol Design Award**. The collaboration with **Recycla**, through the **ECOL360° Environmental Management System**, has made it possible to **recover 100% of production waste, avoiding the generation of 7,779 kg of waste per year**. Furthermore, the company exclusively uses cardboard packaging, completely eliminating plastic and thus promoting recycling.

To minimize emissions, Arbi has implemented a **post-combustion system** for the disposal of solvents, burning the "VOCs" and preventing air pollution. In addition, a **cascading water system** allows the efficient recovery of excess fumes and paints, improving the quality of the painting process.

Energy efficiency is another pillar of Arbi's corporate policy. The company has invested significantly in the installation of two photovoltaic systems, 800 and 600 kW respectively, for a total of 2,575 monocrystalline panels, capable of generating **1,100,000 kWh of clean energy per year**. This investment makes it possible to **avoid the emission of 609 tons of CO₂ per year**, actively contributing to the reduction of the ecological footprint.

Attention to the environment is an integral part of Arbi's corporate vision, which continues to invest in innovative technologies and solutions to ensure increasingly responsible production. Every action is guided by the conviction that sustainability is not just an objective, but a continuous path towards a greener and more conscious future.
